

I strongly support Title 2 Classifications for ISP regulations. I strongly support net neutrality. Do not repeal or reclassify this regulation.

Net neutrality benefits consumers from being pigeon-holed into purchasing services and being penalized for purchased competitors' products. By repealing and reclassifying this regulation, you are creating monopolies and the ability of the telecommunications industry from taking over, sky-rocketing their prices and removing consumers' right to choose between services. Keep the regulation as is.
